Diseases and Pests of Cultivated Plants, Vol. 6: Sprays and Spraying (Classic Reprint)

By J W Eastham

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Diseases and Pests of Cultivated Plants, Vol. 6: Sprays and Spraying The slime-moulds differ from typical fungi chiefly in the body not being formed of hyphae, but, until spore-formation, of a mass of naked protoplasm or living matter, without any containing membrane. As disease-producers they are comparatively unimportant, powdery scab of potatoes and club-root or finger-and-toe of cruciferous plants being the chief diseases due to them. Fungi reproduce by means of minute bodies termed spores, which are, in a sense, comparable to the seeds of higher plants. These spores vary greatly in shape, size, and the manner in which they are produced. They may be spherical, oblong, or thread-like; borne exposed at the tips of special hyphae, or enclosed in sacs (sporangia). Often very special fungus-structures are produced solely with the object of forming and distributing these spores. What we commonly term a mushroom, for instance, is nothing more than a fructification or reproductive structure, the mycelium or feeding portion of the plant being in the soil - the so-called spawn. Although spores vary much...

Reviews

An exceptional publication as well as the font employed was exciting to see. it was actually writtern extremely flawlessly and helpful. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Dominic Collins**

This ebook could be worthy of a read through, and far better than other. I am quite late in start reading this one, but better then never. I realized this publication from my dad and i advised this publication to learn.
