

Aqueous Polymer - Cosolute Systems

By Dan F. Anghel

Springer Apr 2003, 2003. Buch. Book Condition: Neu. 280x210x15 mm. This item is printed on demand - Print on Demand Titel. Neuware - Springer-Verlag 2003 This issue is dedicated to Doctor Shuji Saito on the occasion of the 50th anniversary of his first paper published in the Journal of German Colloid Society. The paper entitled Die Solubilisation von Polyvinylazetat by N. Sata and S. Saito appeared in the Kolloid Zeitschrift (1952) 128: 154. According to the title, the paper dealt with the solubilization of poly(vinyl acetate) (PVAc) in aqueous sodium dodecyl sulfate (SDS) solutions. The authors observed that PVAc, a water-insoluble polymer, is completely dissolved by micellar SDS solutions, a result that mostly intrigued them. One has to recall that at that time, the micellar solubilization was the only available theory to explain the dissolution of hydrophobic compounds in micellar systems. The theory worked well in the case of low molecular weight compounds like hydrocarbons, oleophilic dyes, etc., which are solubilized in the inner core of the micelle, but how can a small micelle accommodate a giant polymer molecule To solve this problem Sata and Saito originally proposed a model consisting of surfactant aggregates formed along the polymer...

Reviews

Excellent electronic book and valuable one. Better than never, though i am quite late in start reading this one. I am very easily can get a delight of studying a written book.
